

To Gerry Cornes

I have again been out to look at the Torrance crossing and consider it extremely dangerous. One of the members has done a survey 2 morning this week and during the half hour period when the school children were crossing there were 26 vehicles jumping the red light. They also counted children and vehicles and according to E D formula it more than warrants both lights and a person. Therefore I am asking that no final decision is taken until a full risk assessment is done. I have the name and telephone no. Of a member of the C C who wishes to be present while this is happening On Monday I will show you the data that has already been gathered

Regards

Una
